The Cluster of Excellence „Inflammation at Interfaces“ would like to invite Master students, PhD students and Postdocs to this year’s summer school.

Program:

**Session I:** From Genes to Function – Insight into disease pathogenesis through the study of rare and common genetic variants

**Session II:** Host-microbial mutualism and its perturbation at mucosal surfaces

**Session III:** Cellular and molecular mediators in metabolic and immune-mediated disorders

**Session IV:** Cellular stress in homeostasis and disease

**Session V:** Integrative approaches to the study of chronic inflammatory disorders

Besides the lectures, there will be short oral presentations (max. 10 min.) and poster presentations which give you the opportunity to present your own scientific research. Please register online at our website.

In the afternoon, round tables will give you the possibility to discuss the topics of the lectures directly with the speakers.

The Cluster will take care of accommodation, and bus transfer. Child care is also available on request. As the number of rooms/beds is limited we would like to point out that Cluster-associated students will be given preferential consideration. Each accepted participant will be given notice by email.

**Registration until August, 31st**
